

# Dabira Projects

## SMS Implementation Spec

For engineering — v2 — July 15, 2026

### Overview

Four SMS messages are being added to the existing Make.com automations. Each fires at a different lifecycle stage, uses fixed copy (below) with only the bracketed merge fields dynamic, and writes to its own tracking checkbox in Airtable to prevent duplicate sends.

SMS provider: Twilio (native Make.com module). Twilio account + phone number must be provisioned before build. Phone numbers in the Leads table are already stored as +1XXXXXXXXXX and should pass to Twilio without transformation — verify on first test.

### Airtable — Leads table fields (ALREADY CREATED)

No action needed — listed for reference. Four Checkbox fields exist in the Leads table with these exact names (Make maps by field name; use them exactly as written):

| Field Name (exact)          | Type     | Status                           | Used by |
|-----------------------------|----------|----------------------------------|---------|
| SMS 1 — Immediate Sent      | Checkbox | Exists (renamed from “SMS Sent”) | SMS 1   |
| SMS 2 — Reminder Sent       | Checkbox | Exists                           | SMS 2   |
| SMS 3 — Delivery Sent       | Checkbox | Exists                           | SMS 3   |
| SMS 4 — No Month Nudge Sent | Checkbox | Exists                           | SMS 4   |

*Note: “SMS 1 — Immediate Sent” is a rename of the original “SMS Sent” field — same internal field ID (fldt7DXvMz6U6MLYu), so existing scenario mappings that reference it are unaffected.*

### SMS 1 — Immediate application (Window Open)

#### Message copy (fixed — final)

*Hi [First Name], it's Dabira Projects. We just emailed your official Wristband Study application (\$200). Look for “You qualify — Wristband Research Study Guide & Application” and kindly check spam if not found in your primary inbox. Please read the email thoroughly as it's detailed before applying, then complete the application as soon as possible — space is limited. After applying, keep a close eye on your email and spam. Any email you receive from the research team — please respond promptly and complete whatever is requested.*

#### Build details

- Scenario: Dabira Email Automation (existing)
- Placement: two copies — one after Gmail module 17 (Window A Open path), one after Gmail module 20 (Window B Open path). Inherits existing route filters; no new filter needed.
- After send: Airtable Update Record → set “SMS 1 — Immediate Sent” = true

#### Mappings

```
First Name → {{first(split(1.fields.`Full Name`; " "))}}
Phone      → {{1.fields.`Phone Number`}}
Update record ID → {{ifempty(46.id; 118.id)}}
```

## SMS 2 — “Sending this week” reminder

### Message copy (fixed — final)

*Hi [First Name], it's Dabira Projects. You selected [Month] — [First/Second half] and your window is almost here. We're sending your official Wristband Study application (\$200) by email this week. Please be on the lookout for “You qualify — Wristband Research Study Guide & Application” and kindly check spam if not found in your primary inbox.*

### Build details

- Scenario: NEW scheduled scenario — “Dabira Application Reminder”
- Trigger: Make Scheduler, runs 2 DAYS before each window opens (confirmed by owner)
- Flow: Scheduler → Airtable Search Records (Leads) → Twilio SMS → Airtable Update
- After send: Airtable Update → set “SMS 2 — Reminder Sent” = true

### Search formula

```
AND({Status} = "Waitlisted", {Month Assigned} = "[upcoming month]", {SMS 2 - Reminder Sent} != TRUE())
```

### Mappings (X = search module number)

|                   |   |                                      |
|-------------------|---|--------------------------------------|
| First Name        | → | {{first(split(X.`Full Name`; " "))}} |
| Phone             | → | {{X.`Phone Number`}}                 |
| Month             | → | {{X.`Month Assigned`}}               |
| First/Second half | → | {{X.Availability}}                   |

## SMS 3 — “We've sent it”

### Message copy (fixed — final)

*Hi [First Name], it's Dabira Projects — your Wristband Study application was just sent. Open “You qualify — Wristband Research Study Guide & Application” and kindly check spam if not found in your primary inbox. Please read the email thoroughly as it's detailed before applying, then complete the application as soon as possible — space is limited. After applying, keep a close eye on your email and spam. Any email you receive from the research team — please respond promptly and complete whatever is requested.*

### Build details

- Scenario: all four “Dabira Send Application” scheduled scenarios (First Half Current, Second Half Current, First Half Waitlist, Second Half Waitlist)
- Placement: immediately after the Gmail send module in each
- After send: Airtable Update → set “SMS 3 — Delivery Sent” = true

### Mappings (X = each scenario's Airtable search module)

|            |   |                                      |
|------------|---|--------------------------------------|
| First Name | → | {{first(split(X.`Full Name`; " "))}} |
| Phone      | → | {{X.`Phone Number`}}                 |

## SMS 4 — “No month selected” nudge (NEW)

### Message copy (fixed — final)

*Hi [First Name], it's Dabira Projects. You pre-qualified for the Wristband Study (\$200), but the month you chose was full, so you're not yet assigned to a month. Please open the email "You Pre-Qualify for the Wristband Research Study — Spots Are Currently Full" and use the link inside to select a month and part of the month that works for you. Kindly check spam if not found in your primary inbox.*

## Build details

- Purpose: recovers waitlisted leads who received the “spots full — pick another month” email but never completed the Waitlist Form (Month Assigned still blank).
- Scenario: NEW scheduled scenario — “Dabira No-Month Nudge”
- Trigger: Make Scheduler, runs DAILY. Targets leads waitlisted more than 24 hours ago with no month selected.
- Flow: Scheduler → Airtable Search Records (Leads) → Twilio SMS → Airtable Update
- After send: Airtable Update → set “SMS 4 — No Month Nudge Sent” = true
- NOTE: this message references a DIFFERENT email subject line than SMS 1–3 (the waitlist email, not the application email).

## Search formula

```
AND({Status} = "Waitlisted", {Month Assigned} = BLANK(), {SMS 4 — No Month Nudge Sent} != TRUE(), DATETIME_DIFF(NOW(), {Email Sent Date}, 'hours') >= 24)
```

*If the Email Sent Date field proves unreliable for this, Submission Date can substitute as the 24-hour anchor — engineer's discretion.*

## Mappings (X = search module number)

```
First Name → {{first(split(X.`Full Name`; " "))}}
Phone      → {{X.`Phone Number`}}
```

## Global notes

- SMS 1 and SMS 3 hitting the same person at different lifecycle stages is intentional, not a bug.
- SMS 1–3 reference the email subject line “You qualify — Wristband Research Study Guide & Application.” SMS 4 references “You Pre-Qualify for the Wristband Research Study — Spots Are Currently Full.” If either subject line changes in the Gmail modules, the corresponding SMS copy must be updated to match.
- Message bodies are fixed copy from the owner; only the bracketed merge fields are dynamic.
- Each scenario's duplicate-prevention filter reads only its own checkbox field — no cross-referencing between the four flags.
